What do you mean by programmed instruction

Explore the future of active learning. Get Top Hat's best blog posts delivered to your inbox If the form does not appear after a few seconds, please try refreshing the page. Typing is an invaluable skill all school-aged children need to learn. There are many ways to teach children how to type, and many websites offer lessons to teach children of all ages. In order to succeed in an online school, students must develop typing skills.Learning.com and Digital LiteracyThe website Learning.com offers a curriculum to elementary and middle school students that teaches the 12 essential skills of digital literacy. These skills include Keyboarding, Online Safety and Digital Citizenship, Coding, Word Processing, Computer Fundamentals, Computational Thinking, Multimedia, Internet Usage and Online Communication, Visual Mapping, Spreadsheets, Databases and Presentations. Lessons include games and interactive videos to keep students engaged and materials for both teachers and parents. Learning.com considers technological standards in state and national standards to develop its curriculum. Students as young as Kindergarten can learn how to type using the Learning.com system. In early lessons, students are asked to locate and type letters of the alphabet and numbers. Next, students learn how to use a cursor, space bar, backspace, enter and words. By second grade, students learn how to use the home row to properly type. By sixth grade, students are learning to type for accuracy and speed. If interested, parents or teachers can sign up for a free 2-week trial.Virtual Learning AcademyVirtual Learning Academy (VLA) is a part of the Jefferson County Educational Service Center. It is an online learning academy for students in grade K-12. VLA offers around 100 core and elective courses to students and is aligned to Ohio's Content Standards. VLA has students enrolled from all 50 states and from approximately 31 countries. Courses are flexible and interactive, and students have the option to take full-year courses that are 36 units or semester courses that are 18 units. VLA courses are designed to promote reading and articulate thoughts. VLA offers curriculum for parents who choose to home-school their children. They also offer an alternative school for students with behavioral, mental health and emotional needs. In addition to the academic curriculum, students are also offered counseling services to support students emotional growth. Imagine LearningImagine Learning is an online community built for students aged Pre-K through 12th grade. Its four essential programs include Language and Literacy, Spanish, Math and Math Facts. Students are taught skills in a fun, interactive way with games, avatars and a reward system. Individualized instruction helps students at every level succeed and gives strategies for improvement where needed. The Language and Literacy program is a great option for children learning how to read. Support for students is offered in 15 languages. Imagine Learning products are used in schools and with educators around the world. Free Typing LessonsThere are several websites that teach typing for free. Typing Club offers students over 650 typing games, videos and tests. "Typing" is an online tutorial for students aged K-12 and beyond. Students are taught how to type and progress is saved every time you log off. "Learn Typing" offers both beginner and advanced lessons for students of all ages. Using tutorials, videos and games, students are taught how to type and use keyboard shortcuts. Learning CatalyticsLearning Catalytics is an interactive tool for students to learn team-based and group-learning lessons. Students are taught using their own smartphones, tablets and computers. An open-ended questions is posed to the student and then he/she is asked to use critical thinking skills to solve the problem in a team-based approach. Instructors can use real-time analytics to see where students need to improve. Learning Catalytics is used in higher education and is a part of Pearson. This is a great program for students learning management skills in the college level. Learning Analytics stresses the importance of working as a team by grouping students for discussion and learning. MORE FROM QUESTIONSANSWERED.NET Also found in: Acronyms, Encyclopedia, Wikipedia. n. A method of teaching in which the information to be learned is presented in discrete units, with a correct response to each unit required before the learner may advance to the next unit.American Heritage® Dictionary of the English Language, Fifth Edition. Copyright © 2016 by Houghton Mifflin Harcourt Publishing Company. Published by Houghton Mifflin Harcourt Publishing Company. All rights reserved. n. a monitored, step-by-step teaching method in which a student must master one stage before moving on to the next. Link to this page: programmed instruction Programmed instruction is a teaching method in which information is presented in sequence of distinct units and the correct response to each unit is necessary before the learner may move to the next unit."We're trying to get out of that textbook mode and more curriculum and standards mode and bring in more digital resources and project learning and then follow up with programmed instruction," says Sherry Goodvin, director of administrative and student services at Maize School District in Kansas, a participating district.In the past, empirical, outcome-based models, exemplified by programmed instruction, drill and tutorials, and mastery-based learning focusing on grammar, vocabulary, and pronunciation, have characterized foreign language computer-assisted instruction.COMPUTER-ASSISTED INSTRUCTION IS REALLY nothing more than the electronic application of well-understood principles of learning that gave rise to the popularity, some years ago, of "programmed instruction." But if the instructional use of computers in libraries amounted to little more than self-paced, guided-task, learning, we should not be very interested. 1. PROGRAMMED INSTRUCTION maheswarijaikumar2103@gmail.com 2. PI ON LINE 3. DEFINITION • "A Programmed Instruction is a method of self instruction that enlists machines or specially prepared books to teach information". CHRIS JORDAN 4. PURPOSE • To manage human learning under controlled conditions. • To promote learning at the pace of the learner. 5. • To present the material in small pieces. • To provide quicker response 6. CHARACTERISTICS • The subject matter is broken down in to small steps called FRAMES and arranged sequentially. • Frequent response of the student is required. 7. • There is an immediate confirmation of the right answer or correction of wrong answers given by the learners (SELF CORRECTING FEATURE). 8. • The content and the sequence of the frames are subjected to actual try out by students and are revised on the basis of data gathered by the programmer (DIAGNOSTIC FEATURE) 9. • Each student progressess at his own pace without any threat of being exposed to any humiliation in a heterogeneous class. • The assumption about the learner is clearly stated in the programmed learning materials. 10. • The objectives underlying programming instructions are defined explicitly and in operational terms so that the terminal behaviour is made observable and measurable. 11. • The interaction between the learner and the programme is emphasized in programmed learning. • Continuous evaluation is possible by recording the student's response. 12. • The strategy provides sufficient situations for teaching the students to discriminate between a range of possibilities and reduce generalizations. 13. TYPES 1. LINEAR PROGRAMMING. 2. BRANCHING or INTRINSIC STYLE PROGRAMMING. 3. COMPUTER ASSISTED INSTRUCTION 14. TYPES OF PI 15. LINEAR PROGRAMMING 16. LINEAR PROGRAMMING (LP) • In LP the learner's responses are controlled externally by the programmer sitting at a distant place. • A linear programme is called "straight line programme". 17. • The learner starts from initial behaviour to the terminal behaviour following a straight line. • The student proceeds from one frame to the next until he completes the programme. 18. CHARACTERISTICS OF LP • LP are exposed to a small amount of information and proceed from one frame or one item of information to the next in an orderly fashion. 19. • The learners respond overtly so their correct responses can be rewarded and incorrect responses can be corrected. • The learners are immediately informed about weather or not their response is correct (feedback). 20. • The learners proceed at their own pace (self pacing). 21. SCOPE OF LP • ELEMENTARY EDUCATION : Generally there are single teacher in certain schools and are required to teach all the subjects. LP will help teachers in such situations. 22. SECONDARY EDUCATION • In secondary education diversity if interest and curriculum neccessitates this method. 23. CORRESPONDENCE EDUCATION : FOR HIGH SCHOOL STUDENTS : Self instruction could be made possible if the correspondence lessons are programmed. 24. FOR SCHOOL TEACHERS • When a new course is being introduced, Programmed instruction will equip them with content and new mehtods of teaching. 25. UNIVERSITY EDUCATION • Standards of higher education can be maintained. • Can be applied for health oriented courses (Health Care Professional Education) 26. PRINCIPLES OF LP 27. PRINCIPLE OF SMALL STEP • A learner can proceed from knowing very little about a subject to mastry over the subject by going through a programme. 28. PINCIPLE OF CONFORMATION • In this kind of reinforcement to work on the programme or to learn, a learner need not wait for a long time to proceed to the next level. 29. PRINCIPLE OF SELF PACING • The learner can work each step as slowly or as quickly as he chooses. 30. STUDENT TESTING & EVALUATION • LP provides a detailed record of the student and is the basis for revising the programme. 31. TYPES OF LP 32. CONSTRUCT RESPONSE • This is a Skinnerian type of learning process. • The learner has to construct responses while going through such formats of programme text. 33. MULTIPLE CHOICE QUESTIONS • Sydney L. Pressy selected a response on each frame and is presented in the discrimination frame sequence type of programme. 34. CONVENTIONAL CHAINING • John Barlow designed this type. • Here each frame is connected to the second frame which becomes a part of the stimulus of the third and so on down the line. 35. SKIP LINEAR • Uses skipping device for solving problems of review and over review where a bright student may skip the simple programme. 36. CRITERION FRAMES • This is used to direct the learner along the linear path according to their responses at those critical situations. • The creation frames decide whether the student should go through a particular sequence or not. 37. RULEG SYSTEM • The contents are organized in terms of rules first and then the examples. • The rule is given a complete form and the examples are in an incomplete form. • A learner has to construct responses to complete the example. 38. EGRULE SYSTEM • This is opposite to the ruleg system. • The contents are organized in terms of examples and then the rules. • The examples are given in complete form and the rules in incomplete form. 39. INTRINSIC STYLE PROGRAMMING 40. BRANCHING / INTRINSIC TYPE • NORMAN COWDER (a contemporary of B.F Skinner) developed this model. • His model focuses problem solving from COMMUNICATION POINT OF VIEW. 41. PRINCIPLES OF BRANCHING PROGRAMME • PRINCIPLE OF EXPOSITION. • PRINCIPLE OF DIAGNOSIS. • PRINCIPLE OF REMEDIATION. 42. PRINCIPLE OF EXPOSITION • The whole concept is presented to the students so that he can learn the complete information better which is provided in the home page. • It serves two purposes : TEACHING & DIAGNOSIS. 43. PRINCIPLE OF DIAGNOSIS • Here the weakness of the learner is identified after exposition and it is assessed whether the learner could learn what the causes are. • And then it is modified. 44. PRINCIPLE OF REMEDIATION • If a learner chooses the wrong alternative, the learner has to move to a wrong page where a remedial instruction is provided. • And the student is directed to return to the home page and he / she is asked to choose the right answer. 45. STRUCTURE OF BRANCHING PROGRAMME • The programme text is called SCRAMBLED TEXT. • This consists of two types of pages : 1. HOME PAGE. 2. WRONG PAGE. 46. HOME PAGE • This page consists of content or concept and followed by multuple choice questions which involve four aspects : 1. TEACHING (The learner goes through the instructions to comprehend the concept or information). 47. • 2. RESPONSE (At the end of instruction, multiple choice is given to the learner to choose the correct response, which the learner has to discriminate. The response is intrinsic). 48. • 3. DIAGNOSIS (If the learner chooses the wrong response, he has to move to the wrong page. If he chooses the right response, he moves to the next home page, where the next unit is presented.) 49. • 4. REINFORCEMENT : The response is reinforced by confirming it at the begening of the home page, hence the learner is encouraged through verbal approval or praise. 50. WRONG PAGE • Wrong page or remedial frame involves : 1. Repeating student response. 2. Negative confirmation. 3. Reason as to why he is wrong. Cont.... 51. Cont.... 4. Further explanation in a single language. 5. Direction as to where the learner should go next. 52. TECHNIQUE OF BRANCHING PROGRAMME • There are two tenchniques : 1. BACKWARD BRANCHING. 2. FORWARD BRANCHING. 53. BACKWARD BRANCHING • If the learner makes an error, he has to take to the remedial frame where; • He is given some more help in understanding the concept and solving the problem. 54. • He is then directed to the original frame number one. • So the learner goes through the same frame twice, once before the remedial material is refered by him. 55. FORWARD BRANCHING • When the learner gives a correct or wrong response, he goes to the next or new page. • If he makes a wrong choice, he is directed to the remedial frame where his mistakes are fully explained. 56. • This is followed by another parallel question from which he goes to the next frame in the main stream. 57. COMPUTER ASSISTED INSTRUCTION 58. COMPUTER ASSISTED INSTRUCTION (CIA) • CIA consists of individual learning booths, each with a console. • It has a television screen for displaying information. 59. • A complete package of information is stored in the system and is presented sequentially. 60. • The learner may question the computer and feed the answer into it. • It helps determine subsequent activities in the learning situations. 61. DEVELOPMENT OF A PROGRAMMED INSTRUCTION 62. DEVELOPMENT OF A PI PHASES OF DEVELOPMENT OF PI I PHASE II PHASE III PHASE Preparatory phase Writing phase Validation phase 63. PREPARATORY PHASE 1. Involves viewing the programme on any topic. 2. Deciding to prepare a programme. 3. Selecting a topic. 64. 4. Preparing a content outline. 5. Specification of objectives in behavioural forms. 6. Specifications (Assumptions about learner). 7. Entering behaviour (Pre requisite skill). 65. 8. Preparation of pre test. 9. Terminal behaviour. Expected performance of the learner at the end of a course. 10. Preparation of post test i.e. preferably criterion test. 66. WRITING PHASE • Involves the following activities: 1. PRESENTATION OF MATERIALS IN FRAMES. 2. REQUIRES AN ACTIVE STUDENT PARTICIPATION. 67. 3. PROVE ANSWERS FOR CONFIRMATION OR CORRECTION OF STUDENT RESPONSE. 4. USE PROMPTS TO GUIDE STUDENT RESPONSE. 5. PROVIDE CAREFUL SEQUENCING OF FRAMES. 68. PRESENTING THE MATERIALS IN FRAMES • A frame is a small segment of information that calls for particular student response. • The task of a programmer is to provide the stimulus necessary to evoke student response. 69. • The acquisition of these responses is a step towards terminal behaviour. • Be sure that each frame presents a relatively small segment of material. 70. • The programmer should present only enough material to elicit a single response 71. ACTIVE STUDENT RESPONSE • In every frame the response of the student is elicited. • The responses in programmed material should be overt or covert. 72. • Student who make overt responses should write down their answers on sheets of paper. • Student who make covert responses should mentally compose their own responses to each blank in the frame before turning the page to the correct 73. CONFIRMATION / CORRECTION • Providing the correct response with which students can compare their own responses is a standard characteristic of programmed instruction. 74. • Students come to know their responses are correct or incorrect. 75. USING PROMPTS • Prompts are provided in the programme frame to guide the student to the correct response. 76. • Prompts are supplementary stimuli; they are added to a frame to make the frame easier but are not sufficient in themselves to produce the responses. 77. SEQUENCING OF THE FRAME • Sequencing depends on: 1. The description and analysis of the behaviours the programme intends to teach. 2. The conditions necessary for the learning required by the various tasks. 78. • All the basic learning conditions - discrimination, generalization, contiguity, practice and reinforcement can be embodied in the frame sequence. • Frame sequence can also provide for review and testing whenever these are necessary. 79. VALIDATION PHASE • Involves : 1. Try out and revision. 2. Individual tryout. 3. Small group try out. 80. 4. Master validation. 5. Editing, reviewing, revising and modifying the programme for final preparation based on fruits of tryout. 81. ADVANTAGES • Programmed Instructions are more successful in critical sagacity (discernment) of the logic or various subjects and inspiring students' creative thinking and judgement. 82. • Good teachers are freed from the humdrum of routine classroom activity and they are in a position to devote their time to more creative activities. 83. • The use of programed instruction has potentials to improve the quality of education in general. • It helps a teacher to diagose the problems of the individual learner. 84. • The use of programmed learning has brought a revolution in the social setting of the classroom. • Many emotional and social problems have been eliminated and problem of discipline have been solved automatically. 85. • Programmed instruction is a great thrust in the direction of individualized instruction. • A well organized programmed instructional device is tailored to cater to the needs of individual students of the class. 86. • By presenting the learning material in a small segments of information (frames), it makes learning an interesting game in which the learner is challenged by his own capabilities. 87. DISADVANTAGES • Programmed instruction does not eliminate competition of grades as often claimed. 88. • Mere manipulation of the machine is not rewarding. Once novelty wears off, or if too many errors appear, the students loose interest and motivation. • Later reinforcements often do not acclelarate learning. 89. • Programmed instruction restricts the learner's freedom of choice resulting in cramping of his imagination and initiative. 90. • Operant conditioning is found sucessful only with some students in some cases and not in all. • PI ignore or make inadequate provisions for variables like cognitive, personality and motivational variables. 91. THANK YOU
